

Tourism New Zealand API Reference – V1 REST

Tourism New Zealand provides APIs to retrieve product and service information from tourism businesses. This information is provided by the business operators themselves. We ask that users of the API register with us so that we can best manage our resources. Application can be made by email to webmaster@tnz.govt.nz

The API follows a REST-like format over HTTP and utilises query string parameters for filtering. Data collections are restricted to pages of up to 30 records at a time to avoid payload sizes that are too large. All data is in JSON format. TLS is enabled on the API endpoints – you will need to make requests using HTTPS.

All requests use the GET HTTP verb only.

Authentication

When you register to use Tourism New Zealand's APIs you will be issued with a token. This token needs to be passed in the HTTP request header.

```
key=Authorization value=Bearer 5E7960D2-AA61-B48A-BD7A14C4BE6C7A01
```

If the header is missing, malformed or your token is not valid you will receive an HTTP 401 Unauthorised response.

Rate Limiting

There is a generous rate limit applied to ensure that the system is practical to use while allowing for protection from an unusual volume of requests. This rate limit may be adjusted from time-to-time based on typical load to ensure all members of the user community can reliably share the resources. We request that you implement some delay and retry strategies to make sure you are considerate of other API users and allow your code to keep running if an error is returned.

Markets and Languages

Tourism operators can provide content targeted to specific markets. Some markets support content in a specific language while others use the default language of International English. You can filter tourism listing results in the API by using the `display_market` parameter. If you omit this parameter, you will get International (default market) listings. Most listings target the International market. The following table summarises the market/language relationships.

display_market	Market	Language
en	International	International English
au	Australia	International English
ca	Canada	International English
gb	United Kingdom	International English
ie	Ireland	International English
in	India	International English
my	Malaysia	International English
nl	Netherlands	International English
sg	Singapore	International English
us	United States of America	International English
de	Germany	German
ar	Argentina	Spanish
cl	Chile	Spanish
mx	Mexico	Spanish
fr	France	French
id	Indonesia	Bahasa (Indonesian)
ja	Japan	Japanese
kr	Republic of Korea (South Korea)	Korean
br	Brazil	Portuguese
cn	China	Simplified Chinese

Errors

If an error occurs, the API will return a status code and an error response. If you request an invalid resource type (something other than `/listings`), or you request a specific resource that doesn't exist, you will get a "404" response.

Status: 404 Not Found

```
{
  "message": "An error has occurred.",
  "detail": "Invalid id passed.",
  "type": "API exception"
```

```
}
```

Unexpected system errors will return a “500” response and will have an unpredictable HTTP body. If you receive these types of error, wait for a while and try again. If the problem persists then contact Tourism New Zealand.

Business Listings Collection

The `/listings` resource is the main endpoint for retrieving a list (collection) of business listings.

`https://api.newzealand.com/rest/v1/deliver/listings`

The `tag` parameter is required. To combine multiple tags, concatenate with a “+” sign or a “,”. The “+” is interpreted as AND which means only listings that have all of the tags will be returned. The “,” is interpreted as OR which means all listings that have any of the tags will be returned. Only one type of delimiter is supported at a time – you cannot combine “+” and “,” to form elaborate queries.

Examples:

`https://api.newzealand.com/rest/v1/deliver/listings?tag=clutha+accommodation`

`https://api.newzealand.com/rest/v1/deliver/listings?tag=hamilton-waikato,pokeno,tuakau,port-waikato,mercer,mokau`

Parameters

Field	Description
<code>display_market</code>	The market for which you want to resolve items. Defaults to “en”
<code>tag</code>	The tag to filter results on. A typical tag is a region such as “hawkes-bay”. See the accompanying spreadsheet for possible values for tags.
<code>modified_after</code>	Get listings modified after this date. Format YYYYMMDDhhmmss
<code>level</code>	The level of detail to return. Possible values are “lowest” (default), “simple”, “full”
<code>deals</code>	Flag to include current deals associated with the listings. (This parameter is ignored if the level is set to “lowest”.
<code>skip</code>	The number of rows to skip when returning results. This enables you to page through data. This defaults to 0.
<code>maxrows</code>	The maximum number of rows to return. An error will be thrown if the value of maxrows is greater than 10,000 for “lowest” level of detail, or 30 for other levels of detail.

Example – Lowest

`https://api.newzealand.com/rest/v1/deliver/listings/?level=lowest&tag=auckland&display_market=en&skip=0&maxrows=10`

```
{
  "meta": {
    "items_retrieved": 10,
    "total_items": 2174,
    "max_items_to_retrieve": 10,
```

```

    "items_skipped": 0
  },
  "link": {
    "first": "https://api.newzealand.com/rest/v1/deliver/listings/?maxrows=10&display_market=en&level=lowest&tag=auckland&skip=0",
    "prev": "",
    "next": "https://api.newzealand.com/rest/v1/deliver/listings/?maxrows=10&display_market=en&level=lowest&tag=auckland&skip=10",
    "last": "https://api.newzealand.com/rest/v1/deliver/listings/?maxrows=10&display_market=en&level=lowest&tag=auckland&skip=2170"
  },
  "items": [
    7317691,
    7317689,
    7317680,
    7317677,
    7317674,
    7317672,
    7317671,
    7317644,
    7317643,
    7317634
  ]
}

```

Example – Full

https://api.newzealand.com/rest/v1/deliver/listings/?level=full&tag=auckland&display_market=en&skip=10&maxrows=2

```

{
  "meta": {
    "items_retrieved": 2,
    "total_items": 2174,
    "max_items_to_retrieve": 2,
    "items_skipped": 10
  },
  "link": {

Single Business Listing

It is possible to get a single listing at a time by using the object ID for the listing.

[https://api.newzealand.com/rest/v1/deliver/listings/\[id\]](https://api.newzealand.com/rest/v1/deliver/listings/[id])

From the collection (described in the previous selection), the object IDs are given in the `items` array in the JSON response at the “lowest” level of detail, and in the `od_listing_o_id` field in the other levels of detail.

Parameters

Field	Description
display_market	The market for which you want to resolve items. Defaults to “en”
level	The level of detail to return. Possible values are “simple” (default) or “full”
deals	Flag to include current deals associated with the listings. (This parameter is ignored if the level is set to “lowest”.

Example – Full with Deals

https://api.newzealand.com/rest/v1/deliver/listings/4965454?display_market=en&level=full&deals=true

Deleted Listings

You can check to see the IDs of any listings that have been deleted over the past hours.

<https://api.newzealand.com/rest/v1/deliver/listings/deleted>

Parameters

Field	Description
display_market	The market for which you want to resolve items. Defaults to “en”
hours	The number of hours from now to go back and look for deleted listings.
skip	The number of rows to skip when returning results. This enables you to page through data. This defaults to 0.
maxrows	The maximum number of rows to return. An error will be thrown if the value of maxrows is greater than 50.

Example

<https://api.newzealand.com/rest/v1/deliver/listings/deleted?maxrows=20&hours=240&skip=41>

```
{
  "meta": {
    "items_retrieved": 20,
